

2.2 Identifiers

identifier / name / underscores

An identifier, also called a name, is a sequence of letters (a-z, A-Z), (0–9), and must start with a letter or an underscore.

case sensitive

Python is case sensitive, meaning uppercase and lowercase letter are different.

Reserved words / keywords

Reserved words, or keywords, are words that are part of the language and cannot be used as a programmer-defined name.

PEP 8

PEP 8 (Python Enhancement Proposal) outlines the basics of how to write Python code neatly and consistently.

Table 2.2.1: Use meaningful variable names.

Purpose	Less meaningful names
The number of students attending the class	ns num nu
The size of a television set measured by its diagonal length	sz_tv size
The ratio of a circle's circumference/diameter	p
The number of jelly beans in a jar, as guessed by a user	guess num njb

Table 2.2.2: Python 3 reserved keywords.

False	async	def	for	is	pass	yield
None	await	del	from	lambda	raise	
True	break	elif	global	match	return	
and	case	else	if	nonlocal	try	
as	class	except	import	not	while	
assert	continue	finally	in	or	with	

**PARTICIPATION
ACTIVITY**

2.2.2: Python 3 name validator.

Use the tool below to test valid and invalid names.

Enter an identifier: _____
